12 VOLT

Eos Bollard

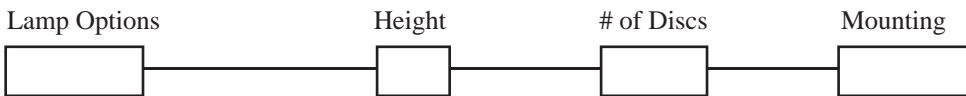

The Eos is the smallest of our bollard family but the quality, engineering and performance are “Classic Auroralight”. This sleek new fixture will complement your next project large or small, modern or craftsman. Machined from solid copper and brass bar stock, it is assembled with stainless fasteners, Pyrex™ glass and high temperature Silicone O-rings, so unwanted moisture is completely sealed out. Featuring an indirect light source with a segmented micro-reflector The Eos is optically advanced. It is flexible for individual installations by offering many options to the designer: two discs or no discs, frosted or clear lens, and can be ordered in 18” or 24” overall heights. Shipped complete with 20w lamp and ground stake.
