PL7 "Eclipse"

The graceful styling of the Eclipse offers the designer a flexible choice that compliments any setting without competing with it. Accepts up to 35W halogen lamp for applications with high performance requirements. Innovative construction seamlessly integrates a white powder coated stainless steel reflector into a heavy gauge copper shade for a lifetime of service. Recommended spacing ranges from 15 to 25 feet on center. The Advanced Optical System™ combines vertical beam control (ALP), with a variety of Directional Reflectors™ (DR) for horizontal beam control. The ALP mechanism allows for easy adjustments to accommodate a wide range of site conditions. The DR controls the pattern of light on the ground. Adding an Internal Diffusion™ accessory (ID) will scatter the light for a softer glow with no shadowing. Shipped complete with a 12 volt 10 watt halogen lamp and ABS ground stake. Covered by Auroralight Lifetime Warranty.
