PL3.5T “Catalina”

The Catalina offers unpretentious elegance in a diminutive profile. At home at an intimate garden setting or equally charming as a whimsical pathway luminaire. The Catalina is a smaller and simplified version of the PL4 La Jolla, without its adjustable lamp position. The Catalina embodies Auroralight quality design, materials, and construction. Crafted from solid brass, copper and stainless steel, then sealed with pure silicone o-rings, the Catalina is truly engineered to last a lifetime. Utilizing a white powder coated reflector and crisp 10 watt halogen lamp, performance, characteristics for this small luminaire are exceptional. Ideal spacing for the Catalina would be from 8’ to 10’ on center. Backed by Auroralight’s lifetime warranty, which protects the luminaire even from accidental damage. Ground stake assembly and a 12 volt 10 watt 4,000 hour halogen lamp are included.
