

## STR SUBTERRANEAN RISER

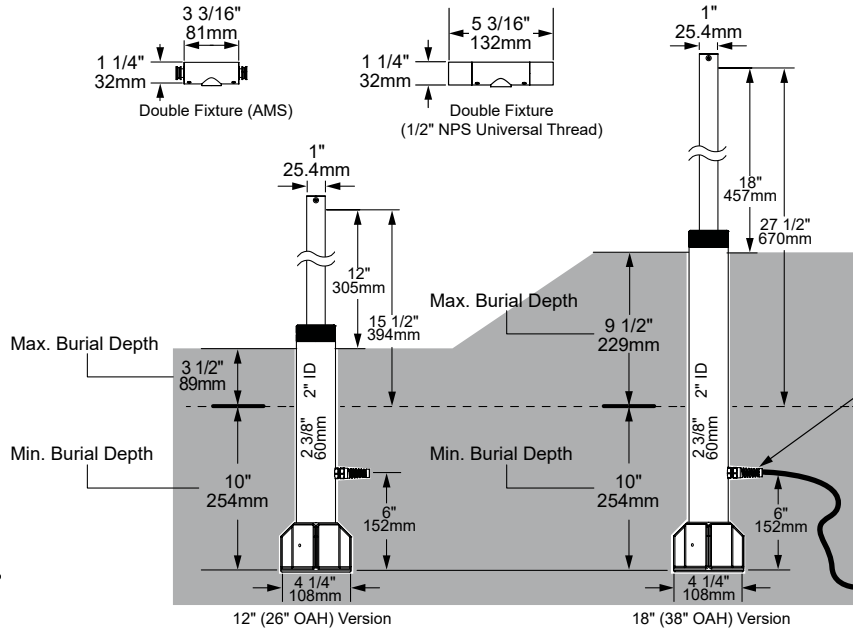

The **STR Subterranean Riser** is part of a complete line of risers from Auroralight. It is specifically designed to be wholly or semi-buried into the soil for a discrete appearance. The STR offers designers and installers a proactive solution to allow future growth in the landscape or seasonal changes like snow. The STR Helps eliminate the problem of maturing shrubs or thick ground covers overtaking light fixtures and hindering performance. The STR is engineered from the ground up, featuring an anti-rotation fin system paired with a parachute style base to prohibit un-earthing during adjustment. The sizeable solid brass clutch assembly controls adjustment, allowing up to 18" vertical movement of one or two luminaires and locks firmly in place.
