

# EXTR-HD EXTENDABLE RISER

The **EXTR-HD Extendable Riser Heavy-Duty**, part of a complete line of risers from Auroralight, is designed to specifically complement the scale and demanding weights of larger and heavier fixtures. The EXTR-HD equips designers and installers with a heavy-duty solution for maturing shrubs or thick ground covers that are overtaking light fixtures and hindering performance. It is a flexible solution for an existing problem or a proactive application allowing for future growth in the landscape or seasonal changes like snow. Meticulously machined from solid brass and paired with a copper tube, the EXTR-HD features silicone O-rings and a robust clutch assembly allowing for full extension of the fixture's original height for years to come. Specify **STANDARD**: sizes of 8"x12" and 11"x19" or consult our factory for custom lengths.
